## SUMMARY

---

A Software Developer with a academic achievement (CGPA 9.70) and hands-on experience in the field of AI/ML and full-stack application development using the Python language. Has shown the ability to develop innovative applications, such as the Interpretable AI Vetting Tool developed for the NASA Space Apps 2025 competition and AutoVest, an AI-based micro-investment assistant. Has the required knowledge of the latest technologies, such as ASP.NET, React, TypeScript, and MySQL, and is eager to use his knowledge and skills to contribute to the development of the most advanced software and AI applications.

## EDUCATION

---

**ITM SLS Baroda University** – Vadodara, Gujarat

Jan 2027

**BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE ENGINEERING**

CGPA: 9.70/10.0. Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems, Web Technologies, Software Engineering.

**DESIGNATHON PARTICIPANT** – Designathon 2026, ITM SLS Baroda University

Feb 2026 – Feb 2026

- Participated in a design-focused challenge, collaborating in fast-paced team environments to rapidly prototype innovative solutions.
- Demonstrated creative problem-solving and user-centered design thinking under tight deadlines.

**GAME JAM PARTICIPANT** – ITM SLS Baroda University (Feb 2025)

Feb 2026 – Feb 2026

- Created and prototyped a game concept under tight deadlines, demonstrating creativity and teamwork.

**CODE CLASH PARTICIPANT** – ITM SLS Baroda University (Feb 2025)

Feb 2026 – Feb 2026

- Competed in a coding challenge, applying problem-solving and algorithmic skills in a competitive environment.

## PROJECTS

---

**AUTOMATED EXOPLANET HUNTER**

Oct 2025 – Oct 2025

*NASA Space Apps Challenge 2025 Project*

- Used data from NASA's Kepler and TESS missions to build a full stack application (FastAPI backend, React/TypeScript frontend) that speeds up the process of checking exoplanets.
- Used a CPU-efficient Gradient Boosting Classifier to get 99.9% recall, which made sure that almost all planets were found.
- Used feature importance scoring to make AI decisions that astronomers can trust and understand.
- Allowed for real-time feedback on batch CSV processing, contamination flagging, and confidence scoring.
- Cut the time it takes to vet from weeks of manual review to milliseconds of AI prediction.

**AUTOVEST— AI-Powered Micro-Investment Assistant**

Dec 2025 – Dec 2025

- Built a full stack web application that transforms everyday spending into intelligent wealth building.
- Created an AI Financial Health Score (0–100) to look at spending stability, emergency funds, and reserves in real time.
- Used Smart Subscription Leak Detection to find subscriptions that aren't being used and figure out how much money could be saved each month.
- Created an Adaptive Investment Engine that changes strategies from conservative to aggressive based on real-time financial health.
- Made it possible to automatically invest spare change by rounding up transactions for easy micro investments.

## SKILLS

---

PYTHON, C++, JAVA, DSA, JAVASCRIPT, ASP.NET, MYSQL , ML , AI , C ,DBMS ,SQL, PYTORCH

## TOOLS

---

Git, GitHub , Figma, Laravel

## LANGUAGES

---

English , Hindi, Gujarati
